

# News Update 4

58 entries from 12 nations have arrived so far for the 2009 Hydro Tasmania ICF Wildwater World Cup.

The entry form for national federations is available on the event website at

www.wildwatertasmania@canoe.org.au

Entries should be sent to: tasmania2009@canoe.org.au

"The best wildwater race course in the World." Ben Maynard–Australian Wildwater Team member

Below the mountains, flowing from a lake, is Tasmania's new wildwater race course—the Meander River.

- Grade 3-4 whitewater, technical rapids and big waves
- Huntsman Lake just above the race start
- Short shuttle
- Close to towns
- Spectacular setting in forest, below the Great Western Tiers
- Race time approximately 18 minutes

Water in the Meander River is kindly provided by Tasmanian Irrigation Schemes.

October 24 – November 7 Tasmania, Australia

Franklin River, South West Tasmania Wild Rivers National Park

## **Visa Information**

All visitors to Australia require a Visa, except residents of NZ.

Many travel agents will organise this for you, however if you need to organise your own Visa, the following website will help:

http://www.immi.gov.au/visitors/

WORLD MASTERS RACES October 24–25 Mersey River

World Masters Race Entry Form is now available on the event website.

www.wildwatertasmania.canoe.org.au

Email: tasmania2009@canoe.org.au

# **QUARANTINE INFORMATION**

#### **BEFORE YOUR BOAT LEAVES YOUR COUNTRY**

- 1. **WASH** your boat and paddling gear in fresh water with 5% detergent or bleach.
- 2. **DRY** your boat and paddling gear completely—including the foam. It must be dry for 48 hours before it arrives in Tasmania.
- **3. DOCUMENT** the wash and dry by bringing a letter from your canoe club or Federation with your boat that states you have washed and dried your gear.
- 4. **INFORM** the organisers of your boat's arrival details

## WHY CLEAN AND DRY?

- Australia has very strict Biosecurity.
- Threat from the introduction of Didymo (Rock Snot)

## WHAT IS DIDYMO?

Didymo (*Didymosphenia geminata*), commonly called *Rock Snot*, is a freshwater alga that is widespread in the Northern Hemisphere. Although not present in Australia, it is considered a significant pest, being highly invasive, and is prohibited from entry to Tasmania. Didymo is made up of microscopic cells. It takes just one cell in a single drop of water to be spread. The cells attach to rocks and plants, multiplying quickly to form massive blooms that completely smother the river. These algal clumps adversely affect water quality, water life, and are a hazard for hydro electricity generation and paddling.

Didymo was recently discovered in New Zealand, where it has invaded a number of rivers in the South Island and is causing a major concern.
